Amadeus Security Management Advanced for Altéa Airlines

Amadeus Security Management Advanced for Altéa Airlines is a comprehensive course designed to provide airline security administrators with the skills and knowledge they need to manage security protocols effectively. With real-world scenarios, the course covers key areas such as security management, access rights administration, product activation, and industry best practices. This course empowers airlines security administrators to take proactive action and handle complex security tasks with confidence.

By the end of the course, participants will gain the expertise to independently manage Amadeus Security Management, ensuring seamless and secure operations.

On this course, you will learn:

- > Assess real scenarios when a security administrator needs to take action.
- > Identify mandatory security configurations required for airlines.
- > Utilize massive tool and reporting dashboard.
- > Manage security data.
- > Manage users.
- > Find permissions for product activation.
- > Handle access rights allocation.
- > Apply best practices for ground handling operations.
